Packages (suite)

Utiliser plutôt le concept d'exportation

```
> (in-package common-lisp-user)
#<The COMMON-LISP-USER package, ...>
> (export 'bar)
T
> (setf bar 5)
5
> (in-package mine)
#<The MINE package, ...>
> common-lisp-user:bar
5
> (import 'common-lisp-user:bar)
T
> bar
5
```

Importation de l'ensemble des symboles exportés:

```
> (use-package 'common-lisp-user)
T
```
