

# Python Programming - Practice 1 -

Marie Beurton-Aimar

## Beginners

**Exercise 1** Ask to the user three numbers and give the maximum value of these ones.

**Exercise 2** You have to manage the schedule of your lab, the user gives to you the time when he begins the experiment and its duration. You have to compute and display to him the time when it will be finished.

To facilitate the program code, follows these way to do :

- Ask the hour at which he begins.
- Ask the minutes at which he begins.
- Ask the duration in minutes .
- Display the hour and the minutes he will finish.

**Exercise 3** Ask to the user a date : day, month (the number) and year.  
Display the date of the tomorrow.
