```java
class Extest
{
  static void extest(int i) throws IllegalAccessException
  {
    if(i % 2 == 0)
      throw new IllegalAccessException("hello");
  }

  static public void main(String args[])
  {
    for(int i = 0; i < 4; i++)
      {
        try
          {
            extest(i);
          }
        catch(Exception e)
          {
            System.out.println("exception caught for i = " + i);
          }
        finally
          {
            System.out.println("finally block executed for i = " + i);
          }
      }
  }
};
```
